SCIS is funded by
the European Union

BENEFIT FROM KNOWLEDGE SHARING

You are one click away from the technology options that work best for you and your circumstances

Find out all about the Smart Technology Filter and learn how to use it

Listen to smart city stories and watch exciting videos

Key performance indicators and detailed downloadable reports

MORE LIVEABLE & SUSTAINABLE CITIES

The Smart Cities Information System (SCIS) brings together project developers, cities, research institutions, industry, experts and citizens from across Europe. We are a knowledge platform to exchange data, experience and expertise and to collaborate on the creation of smart cities, providing a high quality of life for its citizens in a clean, energy efficient and climate friendly urban environment.

LISTEN TO THE SMART CITY

SCIS focuses on people and their stories – bringing to life best practices and lessons learned from smart projects. Through storytelling, SCIS portrays the “human element” of changing cities and restores qualitative depth to inspire replication and, of course, to spread the knowledge of smart ideas and technologies.

SCIS COLLABORATES WITH OTHER EU INITIATIVES

Launched with support from the European Commission, SCIS encompasses data, experience and stories collected from completed, ongoing and future projects, mostly co-funded by the European Commission. Focusing on energy, mobility & transport and ICT, SCIS thus showcases solutions in the fields of energy-efficiency in buildings, energy system integration, sustainable energy solutions on district level, smart cities and communities and strategic sustainable urban planning.

ASK, LEARN & SHARE

SCIS is more than a database – we offer webinars and workshops on findings of the projects as well as trainings on how to get the most out of the SCIS database and the website's resources, thus encouraging replication of smart ideas.

- Discover a platform that shares knowledge and solutions to overcome challenges
- Access the SCIS database, benefit from the experience of many European cities and learn from their best practices
- Be part of an active and strong community
- Apply proven technological and innovative energy solutions and follow a city's journey to become smart as well
- Showcase your energy data and technologies, success stories and lessons learned

NOW IT'S YOUR TURN:

Share your knowledge and learn from the others!
www.smartcities-infosystem.eu

BETTER TOGETHER

STORIES WORTH REPLICATING

With storytelling, SCIS brings best practices and lessons learned to life. We explore the smart city narrative and tease out links between various projects. We identify shared challenges and workable solutions. Understanding the “human element” and listening to the citizens in European Smart Cities giving qualitative depths.
